

Software Project Plan

Project Plan: Lost and Found Management System

1. Project Overview

The **Lost and Found Management System** is a web-based platform designed for users in universities, corporate spaces, or public areas to efficiently report, search, claim, and manage lost and found items. The system streamlines communication between finders, owners, and administrators while ensuring security, transparency, and ease of use.

2. Project Objectives

- **Digitize** the lost and found process.
 - **Improve recovery rates** through smart matching and notifications.
 - **Ensure security** through authentication and admin verification.
 - **Foster trust** with anti-fraud measures and dispute handling.
 - **Enable scalability** for future integration with third-party services.
-

3. Scope

- User Registration and Login (Email, Phone, Google OAuth)
- Lost Item Reporting
- Found Item Reporting
- Smart Matching System
- Admin Verification and Moderation
- Search and Filters (Category, Date, Location)
- Image Upload and Preview
- In-app Messaging System
- Notifications (Email/SMS/In-app)
- Dashboard for Admins
- Location-Based Search
- Social Media Sharing Options
- Reporting Fraudulent Listings
